Preservation of Democracy

In these days of international strife and internal controversy, with protagonists of Fascism and Communism in the saddle in some countries and advocates of these and other lanes striving to get the upper hand in other realms, the people of Western Canada have every reason to be thankful that they are citizens of a country where democracy reigns—a country in which the people themselves have the right to say what they want and in which the previous privileges of free speech and a free press still prevail.

Peers are frequently being expressed, however, that democratic countries are in danger of being overthrown by the fighting forces of dictatorial countries and that democracy is in peril of extinction. No doubt, there have been some grounds for such fears, but to-day the greatest danger to self-government comes from within, rather than without.

It can be taken for granted that the great bulk of the people of this country are not prepared to surrender their liberties to any form of dictatorship, whether group or individual. The rights of free speech and freedom of action are cherished and there are few who would relinquish them in favor of benefits, imaginary or real, which would result from abandonment of the self-governing principle.

But if these rights and privileges are to be conserved, it is essential that the standard of education of the people be high and that they be of strong moral fibre, for in a democracy it is a sine qua non that the leaders of government must possess these attributes in high degree and it is also a fact that in these respects the leaders cannot be far in advance of the electorate who give them their authority or they will not be in office very long. No fact is the ideal people the type of government that the people of a democracy get depends upon themselves and is no higher than they deserve. Hence, the importance of an enlightened, intelligent and unselfish electorate if democracy is to be preserved in an age of conflict between dictatorships and democracies.

This thought is very aptly expressed by James Trusler Adams in the New York Times Magazine as summarized by the Reader's Digest in the following words:

"Just as a despot may be benevolent or cruel, so a people which governs may be educated, wise, public spirited or the reverse, and, amplifying this idea:

"Both democracy and the vision of a very high standard of material living for all are new. Man is by nature selfish. He looks first to the good of himself, his family and his group or class, rather than to that of all. Pressure groups arise. If such groups learn, as they have done, to use the machinery of democratic government more rapidly than they develop the social and moral spirit, that can alone maintain democracy, it is far from unlikely that they may destroy the democracy of the State, pull down the entire structure, and in the resulting chaos and distress be willing to give up the dangerous and difficult adventure of self-government to any man who will promise a false security."

There is also the race, which may be lost, between education and the increasingly complex demands on government. Few, if any, are the citizens, with their own means to look really competent opinions on such diverse topics as, say, money, price regulation, labor, agriculture, foreign affairs. In so far as a pure democracy tends to make rubber stamps of its representatives, these and other leading mental and moral problems, it will tend to make costly and perhaps fatal mistakes."

After exploring the theory that democratic government is more inefficient than a dictatorial one, Mr. Adams goes on to say:

"On the other hand, the dictatorial-material and spiritual—not the people to-day under a Mussolini, a Hitler or a Stalin does not indicate that the wisdom of men promises better conditions for all than the folly of the many. In what totalitarian state, he asks, "are the all-round conditions for a contented, wholesome, free and full life better than they are in the Scandinavian countries, the British Empire and the United States?"

"There are, however, these and other leading mental and moral problems for democracies as for individuals. A man who does not bother to educate himself, who wants only easy money regardless of the consequences to others, who declines to work if he can be supported by somebody else, who thinks he has a right to all he wants, who thinks only of claims and not of duties, and so on, is not likely to be a success. Neither is a democracy made up of such."

Food Prices Climbing

Bureau of Statistics Reports Increase in Living Costs

The cost of living is climbing. The general index of the cost of living for Canada, computed by the Dominion Bureau of Statistics, was 82.3 in April as compared with 82.0 in March.

The retail price index of foods rose from 75.7 in March to 76.3 in April. Considerable gains were reported for a wide range of foods, including butter, lard, flour, bread, sugar, tea, coffee and several meats, although moderate decreases occurred for eggs, corn, potatoes, marmalade, jam and coffee. There were no changes of any importance recorded for other budgetary groups.

The cathedral at Toledo, Spain, has a monumental statue 12 feet high embellished with 260 statues of solid gold. The largest of these was made from the gold which Columbus took to Spain after his first voyage of discovery.

The common house spider has six spinnerets, each of which is covered with tiny spinning spools and out of these come jets of liquid silk, hardening instantaneously on exposure to air.

"Empress," an Indian elephant, served on both sides during the Civil War. Both the South and the North used her for hauling supplies at Nashville, Tenn.

Farm Machinery Business

Stagging A Comeback In Western Canada After Seven Year's

After seven long years, the farm implement business is picking up in Western Canada.

The prairie farmer is once again in the market, making orders for overdue replacement of farm machinery, implement company officials at Winnipeg said.

One major company reported 50 per cent. increase in sales in the first four months of this year compared with the same period last year. Other companies also reported considerable increases.

Prevailing high prices for wheat and optimistic crop conditions in Manitoba and parts of Saskatchewan and Alberta have led to the buying wave, it was stated.

The implement business has been in a slump since 1929 for the last past seven years farmers' demand for farm machinery in Western Canada has declined in face of poor grain prices, drought and general economic instability.

Special Type of Glasses

Keenly Wearer To Read Comfortably When Lying Down

"Reclining spectacles"—glasses for invalids and others who have to lie more or less flat on their backs, and who wish to read—were shown to the public for the first time at a pair of eyes which project incoming rays of light in such a way that the wearer can read a book held vertically at arm's length, resting on the waist—in a position where he could not be read at all, ordinarily, without raising the head from the pillow.

Corrective lenses for righting defects of eyesight in the usual way will be combined with the new prism—science Service.

One Of Britain's Heaviest

Man Twenty-Four Years Old Weighs 448 Pounds

When Herbert Savage, of Woburn, England, who weighs 448 pounds, fell and broke his ankle, six men sent from the hospital had a hard time lifting him into an ambulance. At the hospital he weighed 448 pounds. His first meal a boiled egg and two slices of bread and butter, the regular diet. His girth is nearly 80 inches. He wears a collar about two feet in length. For his age, 24, he is one of the heaviest men in Great Britain. Last year Richard Harrow, who weighed 440 pounds and was known as the "quarter-a-ton man" died at Southend.

New Organ In Abbey

Installed At Cost Of Around Hundred Thousand Dollars

Radio fans who listened to the broadcast of the coronation of King George and Queen Elizabeth, 13, enjoyed a much better musical program than the actual participants did at the time of King George V's coronation in 1911. Installation of a new hundred thousand dollar organ in the Abbey enabled the authorities to draw up a much more comprehensive musical program than at the last coronation.

The old Abbey organ, built 200 years, completely collapsed early last month.

Moon farming, the planting of seeds in accordance with certain phases of the moon, has absolutely no support from any scientific point of view, according to a report of the U.S. Department of Agriculture.

"Japan. Sixteen twenty-one West."

"Your first initial, please."

"O.K. K."

"Excuse me, it isn't O.K. You didn't understand me; I said 'O.K.'"

"No. Rub out the O, and let the K stand."

The clerk began to look haggard.

"Will you please give me your initials again?"

"I said K."

"Pardon, you said O. K."

"I said 'O.K.'"

"And now you said K."

"Allow me to finish. I said 'O.K.' because I didn't understand you when you asked me. I didn't mean it was my initial. My name is Kirby Japan."

"O.K."

"No. Not O, but K. Here, give me the pencil and I'll write it myself. There, I guess I've O.K. now."—An Apollo Log

By actual test, handwriting in ink requires nearly five times as much light to be legible as writing in ink.

New Scientific Finds

Were Discussed At Annual Meeting Of Virginia Academy

A new type of high speed roller which spins freely in space. Dr. Fred T. Holmes of the University of Virginia, may provide a new tool for most research and studies of such fundamental things as the speed of light.

Addressing the annual meeting at Charlottesville of the Virginia Academy of Sciences, he described how for the first time it is possible to suspend the tiny top between two magnets which just overcome the pull of gravity.

Chemical houses made largely of the new products of organic chemistry were predicted by Dr. G. C. Curme, vice-president and director of research of the Carbide and Carbon Chemical Corporation.

At present, Dr. F. B. Jewett, president of the Bell Telephone laboratories, explained, the telephone voice has had to pass over an actual, physical circuit, that is, a pair of wires.

"Recently, however," he said, "thanks to the research laboratory, operating in a myriad of fields, an entirely different method of providing large numbers of channels has been achieved and the way opened to an unknown limitless extension."

Lady Shaughnessy Dies

Was Widow Of One Of The Founders Of The Canadian Pacific Railway

Dwight Lady Shaughnessy, widow of R. H. Lord Thomas George Shaughnessy, one of the founders of the Canadian Pacific Railway Company, died in Montreal after a brief illness. She was 86 years old.

Lady Shaughnessy, whose husband died in December, 1923, had been ill only four days. She was the daughter of N. N. G. of Milwaukee, Wis., she was married in 1880 to the Irish railway planner who received his knighthood from King Edward in 1901.

For many years Lady Shaughnessy was active in social and charitable work, but since her husband's death had lived in retirement at her big Neil street residence.

Surviving, incidentally, are Lord Shaughnessy, visiting in London with his daughter, and two daughters, the Hon. Marguerite Shaughnessy and Hon. Mrs. R. M. Redmond.

SELECTED RECIPES

CHOCOLATE SOUFFLE

Temperature: 325 degrees F. Time: 45 minutes.

3 square unsweetened chocolate 1/4 cup sugar

3 eggs 1 tablespoon butter

1 tablespoon Benson's Corn Starch 1/4 cup milk

1 teaspoon vanilla

Method: Melt chocolate in top of double boiler; add 1/4 cup sugar and beaten egg yolks. Stir and cook until smooth. Melt butter; blend in Benson's Corn Starch and let bubble 2 or 3 minutes. Add cold milk; stir and cook until sauce is smooth. Combine two mixtures and let stand until at room temperature. Stir in the egg whites adding reserved 1/4 cup sugar. Fold into the chocolate mixture. Add vanilla. Stir Benson's Corn Starch into the mixture of sugar and ungreased cake; pour in soufflé mixture. Bake in slow oven until light and delicately browned. Serve at once with "Crown Brand" sauce.

According To Leopard Law

Three new-born leopard cubs were killed by their mother in Lincoln Park Zoo, Chicago. Attendants attributed the infanticide to an inextinguishable law of leopards—never to let their young be reared in captivity.

WITH FRANCO'S VOLUNTEERS ON THE BASQUE FRONT

This photograph shows Franco's forces in Ochandiano after they had captured the town and wrecked the buildings. Note the armored cars on the left.

Seed Growers To Convene

Canadian Seed Growers' Association Meeting At University In Saskatoon June 24th To 26th

On the morning of Thursday, June 24th next, the annual meeting of the Canadian Seed Growers' Association will be convened at the University of Saskatchewan, Saskatoon, Sask. The party will be welcomed to the University by President W. C. Murray, and a three day session of business and entertainment will follow. Business sessions will be held in the evening in the University at very reasonable rates.

HIS RHEUMATISM LEFT HIM

Sufferer Follows Good Advice—and Takes Kruschen

The writer of the following letter had a bad attack of rheumatism, and was advised to take Kruschen. He did, and describes his experience in the following words:

"About two years ago I developed a severe attack of rheumatism in my left shoulder blade. I tried all sorts of medicine, but with no result, until one day, on hearing of my suffering, exclaimed, 'There is only one thing for rheumatism! That is—Kruschen!'"

"I decided to purchase a bottle, and for the first week took a teaspoonful in a glass of hot water each morning. The pain gradually disappeared and the sore went entirely. I am still taking my early morning dose, as I feel convinced that it is helping to keep me fit."—J.O.B.

Rheumatic conditions are frequent, the result of an excess of uric acid in the body. Two of the ingredients which make up Kruschen are uric acid and sodium bicarbonate. These two work in dissolving uric acid. Other ingredients in Kruschen help Nature to expel the dissolved acid from the system.

treated in the use of pure variety of Kruschen. A hearty welcome to the University.

The entertainment part of the program was very interesting. Those interested in the neighborhood of Saskatoon, and the friends of certain seed

F. W. TOWNLEY-SMITH

President

The Hon. J. G. Taggart, Minister of Agriculture for Saskatchewan, will be present and will address the gathering.

The subjects to be discussed at the meeting will include the new seed resistant wheat, the treatment and control of root diseases which affect the cereal grains, and other questions bearing on the work of the C.E.O.A. Prominent speakers are being invited to give addresses and lead in the discussion.

Several years ago a branch of the Canadian Seed Growers' Association was organized in Saskatchewan, and the members of the branch, together with local committees appointed for the purpose, are sparing no effort to arrange an interesting, instructive and enjoyable time for those who can attend the meetings. Empire Search For Raw Materials Is A Highlight Of Britain's Defence Program

Empire search for important raw materials is a highlight of Britain's defence program which has called upon private industry to line up behind the government in shipping, machine shop and construction camps.

The idea is to guarantee a source of supply, expedite the program and guard against an industrial slump after the rush period is over.

Faced with the problem of locating a convenient spot within the empire for the accumulating of large oil reserves, Sir John Calman, commissioner by the government, concentrated on Trinidad as a focal point of the proposed oil defence plan.

Situated at the heart of the empire, within comparatively easy access of the British and Commonwealth, the island off the coast of Venezuela produces large quantities of oil, has modern refineries, pipelines and organized transport.

It has been pointed out that while British finance controlled some of the largest oil undertakings in the world, the projects were for the greater part in countries outside the empire.

With a shortage of funds threatening to hold up armaments manufacture, one section of the English press has called for further reduction of import duties on the iron and semi-finished steel. It has been suggested the next report of the import duties committee may recommend government control of the industry in the interest of the country and to counteract the effects of the cartel and prohibitive duties on imports from other countries.

On the Clyde \$175,000,000 worth of naval tonnage is under construction or contemplated. It is possible workers may have to be recruited from Belfast to meet the extra attention. Work on some private contracts has gone begging with the exception of the motor ship of the Queen Mary on which considerable progress has been made.

Another suggestion affects the building industry. It has been reported the government may ask local authorities to slow down their housing programs and give priority to new airframe construction throughout the country. This, it is claimed, would also dislocate employment over a longer period, and avoid a slump.

Meanwhile the Building Industries National Council has offered to assist the government with information on the available resources of labor and material; of the extent to which productive capacity can be rapidly increased if necessary; and organization and planning of large-scale building works.

A Western Film

Scene Setting To Be In Price

Albert National Park

The Prince Albert National Park will become more than a vacation resort for better business men and pretty rural bathers this summer. It will be the location of a film and among those to be present will be Gary Cooper and Jean Arthur, the "Dancer" headliners, according to a report received. The two stars will appear in a film tentatively titled "Timber" to be produced in the park during the summer.

Already on the way to the park are M-G-M cameramen Rob Lightner and a party of assistants. They will be followed later by others, including Cooper and Miss Arthur to swell the total number to 50. The stars are expected to arrive in June. In the meantime, however, filming of certain background shots will take place.

Lightner is expected to find snow in the park and has announced he may have to go farther north for the snow or wait until it arrives again. Among those to arrive first will be Phyllis Gordon (Dancer), film writer, and her mother, Mrs. Estelle Demarest-Saakatoon Star-Phoenix.

Definite Information

Passing through a village, the motorist asked an old inhabitant of the place a distant town. The old man did not know. On reaching the end of the village he heard shouting behind him. Turning, he saw the old man, accompanied by another man, standing in the road. He stopped, and waited for the two to approach.

"This is me mate, Charlie Burt," said the old man. "He don't know either."

Monocle to have a wind instrument orchestra of 80 pieces.

Canada's 1935 exports of fish were valued at a total of \$24,633,000.

Luxurious Flying Hotel

Wrecked Hindenburg Was Last Word In Airplane Construction

The wrecked Hindenburg, considered the greatest product of the science of airship construction, was the largest Zeppelin ever built—381 feet long.

Powered by four huge 3,000-horsepower Diesel engines, it had a maximum speed of 84 miles an hour. Its payload capacity of 15 tons constituted the largest combination of passengers, freight and mail ever lifted off the ground by aircraft.

As a flying hotel, it was the most luxurious of the 120-odd airships built in the 30 years since Count Ferdinand von Zeppelin made his first historical dirigible flight. Its elaborate interior decorations, featured by murals depicting the spacious passenger quarters.

To promote more than 150 feet long, included by unbelievable gas, provided an unobstructed view in all directions. Distances were marked on the ship, were equipped with folding decks, and shower baths, with devices for measuring the consumption of water, which was distilled from air on the trip.

The airship had a completely equipped kitchen with electric and refrigerators and a large stock of linen, china and silver. The huge motor compartment was divided into 24,000 pounds of baggage and passengers were allowed to take along their cars or even light airplanes.

The ship was destroyed by fire on May 6, 1937, during its last flight. The cause of the disaster is still under investigation. The ship was carrying 97 passengers and crew.

From the control gondola, a passageway led to the wireless room, which had the latest developments in all types of radio apparatus. The other side of the lower passageway were the huge containers of crude oil which fed the engines.

The ship was also equipped with a fully equipped galley, with a kitchen, dining room, and a large stock of food. The ship was also equipped with a fully equipped galley, with a kitchen, dining room, and a large stock of food.

Poultry Outlook Favorable

English Market Would Take All

Possibility of an egg shortage next fall is causing real concern. The improvement now is that eggs will be scarce from September to January and that poultrymen will do well to get their birds in lay at that time.

Some authorities are advising producers to raise every chick that they can produce. While the cost of feed is rather high, prices of all commodities are rising and it is reasonable to expect that when conditions improve themselves eggs and poultry will also be higher.

The egg market at Eastern centres is now up to three cents above the corresponding period of a year ago, and with some recent reductions in feed prices, the prices of eggs and food are coming more in line with each other.

While the outlook for poultry is not yet as critical as that for eggs, there is reason to believe that with the higher prices prevailing for other classes of meats, the outlook for poultry, particularly chickens, is very favorable. Canada has just experienced the largest period of industrial employment and the general industrial condition in England are at a high peak without money or credit being in demand. In order to meet that demand, chicks must be hatched and raised in England.

Looking to Canada for more market poultry, high feed prices are not a high price to pay. It is a fact that affects every country, the poultrymen in England even more so than the poultrymen in North America, because their prospects in a competitive way in market poultry should be even brighter in 1937 than they were in 1935.

Typical of the improving quality of Canadian chickens going to Great Britain is the fact that one of the export reports recently contained all milked birds, 200 boxes of milked A and 150 boxes of milked B.

In Days Of Old

When King Henry VII. Had His English

Mailship Haunted As Traitor

No account of the infliction of capital punishment on animals is altogether new when the name of King Henry VII. of England and his remarkable manner of governing not his country but his private menagerie is recalled. In his reign, the king's ship, the "Golden Hind," was used as a floating menagerie, and the king's menagerie was used as a floating ship.

The ship was used as a floating menagerie, and the king's menagerie was used as a floating ship. The ship was used as a floating menagerie, and the king's menagerie was used as a floating ship.

Sells Canadian Products

Intensive Advertising Campaign In

United Kingdom Is Success

During the past few months the federal government has been conducting, in certain circles in the United Kingdom, an intensive "Canadian week" campaign. The campaign was designed to draw the attention of consumers to the variety and merits of the Canadian food products available for their use. The result in some instances the sale of Canadian products in the week in which the campaign was launched in their area increased by 20 to 100 per cent. In comparison with the corresponding week of the previous year. The largest wholesale organization in Scotland, for example, sold hundreds of retail cases, reported an increase of 100 per cent in the sale of salmon. Although the campaign will not terminate until the end of the year, it is already being reported from United Kingdom that supplies of certain Canadian products, particularly salmon, are being sold in large quantities and cannot be sold in adequate quantities as compared with supplies of similar foreign articles. Uniformity in quality and continuity of supplies are essential.—Brandon Sun.

Best Friend

Britain Most Loyal European Nation

By The American People

A recent nation-wide poll conducted by the Institute of Public Opinion, marking the twentieth anniversary of the United States entrance into the World War, indicates that Great Britain is the most liked European nation among the American people by a wide margin.

Great Britain heads the poll with 42.9 per cent, while France and Poland are second and third. The vote in favor of Great Britain was five times greater than scored France and six times greater than scored Poland. Germany, the vote by percentages was as follows:

Britain 42.9, France 11, Germany 1, Finland 1, Ireland 4, Italy 1, Sweden 2, Belgium 2, Norway 2, Denmark 1, Greece 1, Holland 1, U.S.A. (Russia) 1, all others 2.

**YOUR
LITTLE SAVINGS...
FINANCE
MORTGAGE LOANS**

TENS of thousands of Canadian farms and
homes benefit from first mortgage loans
made possible by the accumulated savings of
Life Insurance policyholders.

For every borrower, there are six thrifty
people who supply the necessary funds.

This fact affords a striking illustration of
the "double duty" performed by Life Insurance
dollars. Not only do they ensure financial
security for the men, women and children of
Canada, but they also help to build and finance
their farms and homes.

Life Insurance companies exercise the
greatest care in the selection of properties
upon which mortgage loans are made. To
safeguard the savings of policyholders, security
of principal and interest is and must always be
the first consideration.

Discipline In Air Attacks

Moral Hindrances To Endure Bombardments In Vital Town

The following article of Major General J. F. C. Fuller appeared in the English Review. Between 1914 and 1918, 111 air attacks were made on England, 92 by Zeppelins and 19 by airplanes, in which 8,900 bombs of all sizes, weighing about 300 tons, were dropped.

In Zeppelin raids 556 persons were killed and 1,387 injured, and in airplane raids 887 and 2,060 respectively. The damage done was estimated at just short of 15 million dollars.

The total casualties were, therefore, 4,820—a truly insignificant figure when compared to our yearly road casualties of 7,000 persons killed and 250,000 injured.

Over the whole of England, casualties averaged 16 per ton of bombs dropped, and in the London metropolitan area from 18 night raids they were 52 per ton of bombs. But in the two daylight airplane raids on London the average rose to 71 a ton.

From the above figures we can gauge the tremendous power of air attacks to cripple industry by terrifying undisciplined workers. We can also estimate the disastrous effects of raids upon the nerves of the masses of the people.

By the middle of 1917, for example, the population of Margate had fallen from 30,000 to 16,000, 14,000 having fled the town.

Sept. 24, 1917, a raid on London took place in which only 35 persons were killed and 70 injured. Nevertheless, 100,000 people sought refuge in the tubes. On the following night another raid took place and 130,000 people took cover in the tubes.

Discipline is the first step in preventing panic then protection through retaliation. Though I do not wish to belittle the importance of being able to hit back, I believe that, when belligerents are in a position to do so, the deciding factor will be the moral bombardments—in other words, national discipline.

Many Tourists Visit Bird Cay

Caño Conte And Bonaventura Island Provide Thrilling Spectacle

Thousands of tourists annually visit the Caño Conte in the vicinity of Ponce Rock and Bonaventura Island attracted largely by the thrifting spectacle provided by colonies of sea-birds which nest on the great rock and on the ledges of the island. The little village of Ponce, located at the very tip of the peninsula, in the shadow of Mount Saint-Anne, has a combination of attractions for the summer visitor that is unique in eastern North America, but the two items of special interest are the great Ponce Rock and the Bonaventura colony that nest on the top of the rock and on the ledges on the face of the red sandstone cliff with which Bonaventura Island, near Ponce, fronts the sea.

Ponce Rock, with its sheer sides rising directly from the water for nearly three hundred feet, and its great arch passage-way, eighty feet in span, through which small boats may pass, is a breath-taking attraction in itself, and the thousands of sea-birds that nest on it and on Bonaventura Island added to its rugged grandeur. More than 15,000 gannets—great white birds with large black wings—make their summer homes here. Thousands of them, looking at a distance like great snowbanks at close-packed in series, rank on their nests on the lofty ledges, while hundreds of others nest and wheel majestically over the sea before the precipice. Other remarkable nestings including condors, and other rare species, form part of this great assemblage.

This interesting bird city is so situated that it may be observed and photographed conveniently without harming or disturbing its feathered citizens. Sea-going motorboats make a specialty of carrying parties of visitors past the lofty cliffs where the gannets nest, and there are excellent points of vantage on the solid land at the top of the cliff and on the crest of the mainland face opposite Ponce Rock.

Had A Close Call

Bob was unable, through illness, to work on pay-day, so called his partner, Mick, to get his wages and bring them along to his home. Late that night Mick arrived at Bob's house, looking rather nervous. "I've lost my wages, Bob," he said.

"Lost my wages, Bob?" began Bob. But Mick interrupted him. "Aye," he started, "and I believe if I had gone on playing I should have lost my soul."

ALL IS NOT QUIET ON RAMPAGING POTOMAC

Scene at Harpers Ferry

Were John Brown to attempt his historical raid on Harpers Ferry to-day, he wouldn't get far because the rampaging Potomac and Shenandoah Rivers have washed out roads and bridges such as the above, and left many homes in this section.

Students Hypnotized

Method Used in Virginia For Improving Average Grade

Hypnotism has been found capable, Dr. D. M. Allen said, of improving the average grades of students from two to 16 points.

The Hampton-Sydney College psychologist told the Virginia Academy of Science he had stimulated a large group of college students by mental efforts by suggestions spoken while they were in the hypnotic state.

A number of falling, or near falling, individuals climbed from the "Y" grade to the one above, he said. Others moved up from the "B" to "A", and two students jumped the entire scale from failure to the honor group, an increase of 16 points in their average grades.

This was done, he said, by talking the student into a hypnotic state and then stating with emphasis: "As the result of this trance your powers of concentration will be greatly increased. Your mind will work better and you will not be nervous during examinations. You will have great ambition to be successful in your studies and to improve your class record."

It was an irrefutable appeal—Canadian Christmas.

Stanley Baldwin's Way

Appeal For Vote Felt By Headed By Office Boy

Some years ago a young lad worked in the office of Stanley Baldwin, now the Prime Minister of Great Britain. It was this boy's delight, along with one or two other young fellows, to plague an old clerk, teasing him unmercifully, and slaying bits of blotting-paper at him.

One day when this mischievous lad had been up to the tricks, and roused the old clerk's anger so that he chased him across the room, he flung upon the door dashed out of the old man's way and ran headlong into the arms of Mr. Baldwin.

Shortly after, Mr. Baldwin sent for the boy. "My lad," he said, "I want to say that if I were your age and were in an office with an old clerk I think probably I should treat him as you do. But I think if I were your age and someone asked me not to treat him as you do (saying because they appreciate the services of this old servant) I should promise not to do it, and I should keep my promise."

It was an irrefutable appeal—Canadian Christmas.

Wool Growers Plan Contest

The Canadian Wool Growers' Association is planning a competition among its members for the production of the best all-Canadian wool suits for the Dime quinquennial.

George Beauchard, M.P., Kamouraska, Que., announced at Toronto. A director of the growers, Mr. Beauchard appealed to the Headquarters Association of Canada for assistance in organizing the project.

Subject Of Medals

A Time And A Place For The Wearing Of Decorations

If it has not already been done, somebody should write a treatise on the subject of medals. The effectiveness of medals, unlike that of lipstick, imitation beauty spots and other forms of feminine personal adornment, depends vitally upon the time and place of the wearing. The occasion is everything.

There was, for instance, that over-assertive territorial who belonged to a Western Canadian regiment and who thought he would improve his appearance when his unit was being inspected by the Duke of Cambridge, then governor-general of Canada. The Duke passed solemnly down the ranks of men, all standing "at the present." Suddenly he stopped and his brow puckered with bewilderment. He saw, glittering below his rifle butt a great shining star—unlike any other decoration in the British army.

"Is this yours?" he asked the soldier.

"Yes, sir."

"What did you get it for?" said the Duke.

The soldier did not flinch. "I got it, sir," he said, "for singing in the choir at New Westminster"—Hastings Spectator.

Prehistoric footprints have been found 10,000 feet up in the Himalayas by Eric Shipton, the Mount Everest explorer.

General use of Christmas cards to convey seasonal greetings at the Yuletide began in 1862.

One Of World's Costliest

Rich Jewels Decorate Two-Handed Sword Of State

Among the bejeweled weapons of the world, the sword of the British kings, the Sword of State is probably the most valuable in the world.

This sword, which is two-handed and has a blade 32 inches long, is carried in the royal procession. Fashioned in diamonds, emeralds, and rubies on the scabbard are the Rose of England, the Thistle of Scotland and the Shamrock of Ireland, each repeated as the scabbard passes. At the bottom of the scabbard is a large turquoise, and at the cross left an enormous emerald of immense value.

During the service the King hands the sword, together with the Gold Spurs of St. George, to the Archbishop of Canterbury, who dedicates its military power to the service of God.

The Sword of State has another curious adventure, for it is held down that 100 shillings shall be paid to the Archbishop of Canterbury to redeem the sword, which is returned to the custody of the Keeper of the Jewel House. This rich weapon is carried before the King by a peer at the opening of Parliament and other state occasions.

At the Coronation the King has actually girded upon him another and shorter Sword of State which was made for George IV. at a cost of \$60,000.

There are three other swords carried behind the King: the Sword of Justice to the "Temporality," the Sword of Justice to the "Spirituality" and the Sword of Mercy. The last, like the famous sword of the romances of chivalry, has a name of its own—Christus. Its blade is cut off sharp and square at the end.

This Dog Felt Strawberries

A. W. Whitney, Port Collins, Colorado, looked over the seed catalogue, glanced at his dog, Rube, then crossed strawberries off the list of things he intends to plant in his garden this spring.

The dog wagged them from the planter and in the Whitney neighborhood last summer few of the berries ever reached a dinner table. Rube will eat cherries, peaches and corn on the cob if no strawberries are available.

William Cuke, a rather portly English sportsman, invented the bowler hat because the conventional top hat got in his way when, while hunting, he had to crawl through hedge.

No human being escaped the Chinese massacre, but one horse did, and on its death it was stuffed and mounted. The mount is now exhibited at Fort Riley, Kansas.

Only the female ferret carries a lantern.

A Subject Of Importance

Former Canadian Citizens Urge Provision Of Valuable Timber Trees

Recalling my early life in Canada as a pioneer surrounded by the most beautiful wooded district in America, trees, wonderful trees in every direction until the advent of the settlers, then the destruction of the trees was the greatest industry of the new settlers. The timber was sold at a low price or burned and the ashes made into potash which was about the only export commodity that the early settlers had in those days.

If that timber were in reliance to-day you would have an asset that would easily wipe out your national debt and leave you a substantial surplus.

In my yearly visits to my native land, I do miss the beautiful wooded districts that I formerly loved to visit. Now I find the towns and cities better wooded than the farm districts are.

The time has arrived when the subject of tree planting and tree production should be of first importance to every loyal citizen of the Empire.

Every farmer should devote at least one-fourth of his land to the production of trees, in the form of a wooded district, with numerous shade trees in other sections.

In summer the wooded section forms a comfortable shade for the farm stock and a beautiful home for birds and other wild life. And in winter the trees serve as a wind break and protection from storms. They also protect the snow from melting thus preventing the causes of many disastrous floods. The falling leaves every year provide a natural fertilizer which is much needed at this time.

Tree planting bureaus should be set up in every province in Canada. And trees should be supplied free of cost to every individual corporation or municipality who will plant them and agree to give them protection for a stated time for proper development.

In the establishment of tree planting bureaus, mature judgment should be used in the selection of the kind of trees to plant. It is just as easy to plant and raise valuable timber trees as it is to raise trees of no timber value. It is a liability and not an asset.

There is a wonderful opening in Canada for the production of trees. You have millions of acres of waste land in every province especially in the north-west provinces. Every colony and province in Canada should have its tree planting department.

Give your Boy Scouts a chance to plant trees, a worthy object for any progressive organization.

What better monument can any citizen erect to his country than a better still a grove of beautiful trees?

While we all realize that only God can produce a tree, still we his people have a wonderful opportunity to assist in their production and thus we can leave not only a fine record for ourselves but our action will be of wonderful benefit to all future generations.—John M. Hoskins, Chicago.

High Death Rate Of Indians

About Ten Times As Great Among Indians As White Population

Death rate from tuberculosis is approximately 10 times as great among Indians as among the white population of Canada. A Dominion health affairs branch, with which the Canadian Tuberculosis Association will co-operate, is being organized to rescue the Indians from the disease.

The plight of the red men was brought forcibly to the attention of parliament in a debate during last session and with an extra vote available Dr. H. W. McGill, director of the Indian affairs branch, which is under Minister Cresser, has started his campaign.

A list of suitable persons to supervise the campaign has been submitted by the Canadian Tuberculosis Association in Dr. McGill and Dr. E. L. Stone, superintendent of Indian medical services. From this list a number of perhaps 15 persons, chiefly medical men but including some laymen, will be chosen. The first meeting of the committee will be held in Ottawa during the week of June 21.

Credited With Idea

Mrs. Marcus M. Marks, 61, pioneer in the daylight-saving time movement, died in New York, a few weeks ago. Although her late husband, a former Manhattan borough president, was called the "father" of daylight-saving, Mrs. Marks was credited with first setting the idea in a German newspaper and suggesting its adoption in this country.

AMAZING PICTURE OF DESTRUCTION OF GIANT GERMAN DIRIGIBLE

It is hardly necessary to explain this picture, which shows the disaster which overtook the German dirigible Hindenburg. This is one of the most famous disasters of the war. The famous German airship, which had been hovering over the mooring mast at Lakehurst, New Jersey, when an explosion, followed by fire, swept the huge dirigible from stern to bow and quickly turned it into a mass of twisted, burning wreckage.

WORLD HAPPENINGS BRIEFLY TOLD

Two naval ships were killed when their planes crashed and sank in the Pacific ocean near the United States fleet's war games, naval officers reported.

The Girl Pat, Grinaby traveler whose adventures astonished the world last summer, has returned to Portsmouth from Georgetown, British Guiana.

William Spears, whose father was keeper of Flower Pot Island light-house in the Georgian bay for 25 years, has been named keeper to succeed him.

United States Labor Secretary Frances Perkins said that legislation to fix "minimum working conditions" tops the Roosevelt administration's labor program.

Proclaimed the "most beautiful child in the world" at a Bohemia, Kansas, fair, Miss Mary Warner needs no greater glory. She declined a stage offer and a possible opportunity because she is too busy delivering milk for her father's dairy.

A dispatch to the New York Times records the death in Italy of Hugh de Trenchard Glasheen, 82, noted portrait painter. He lived in Toronto for a while as a young man, and one of his paintings, "Lady in Black," hangs in the national gallery in Ottawa.

An increase of nearly 10,000 passenger car licenses sold in the first four months this year against the figures for 1936 was believed a sound indication of rising prosperity in Alberta, license department officials said. Sales totaled 54,300 up to May 1, 1937.

Colonel Mario Pensi of Italy believed the world altitude for planes by flying to an indicated height of 25,600 metres (84,000 feet), his mark exceeded the record of Squadron Leader P. R. D. Swan, of the British Royal Air Force, listed at 25,220 metres (82,944 feet).

The University of Manitoba chemists are working out a preparation that will kill dandelions without injuring grass. They reported findings on Manitoba's legislative grounds lawns may be in force in a short time this spring. The new method of killing them has not been revealed.

More Like Printing Press

Typewriter Used By Japanese Steno-grapher Has 5,000 Keys

Typists, whether they use the "old" and "new" system of typewriting, are a special "pound the key" course, often feel that typing is one of the most strenuous jobs in the world. But if they think they are overworked they should call on Kathleen Tsuchiya at the Japanese Chamber of Commerce in San Francisco. Imagine a typewriter with 5,000 keys. That's what Kathleen works on when she is doing Japanese letters. She has 5,000 keys on this machine of separate alphabets of a Japanese type-printer to produce the string of hieroglyphs which make up a Japanese letter. An unnamed Oriental genius invented the machine and it had 8,500 pieces of metal type integral halves and devised an arm that lifts each key up and down. It is upon letter paper. The funny part about the story is that when it arrived from Japan, puzzled customs officers finally classified it as a printing press. There are six Japanese typists in San Francisco but Kathleen Tsuchiya is the only one who writes both English and Japanese. St. Thomas Times-Journal.

Remorse Of Industry

Business in England Built Up From Small Start

The erection, at present taking place on a 4½-acre site, of a factory for dry-cleaning, dyeing and finishing of cloth and cleaning in Wolverhampton, England, forms a chapter in a romance of industry. The small Midlands town of England have long been famous for their self-made men, but on this occasion it is a self-made woman, Mrs. Marshall, who directs the business. The firm, which began sixteen years ago, with one small shop, now has two factories (one from the one being built) and 60 branch shops located in six Midlands counties.

Water Taken From Air

Water is taken from the air by huge, dome-shaped "air" water towers, which are being built in dry areas of Europe. The warm outdoor air enters the dome through the openings, and is rubbed off its moisture by contact with the cold interior.

News by radio can't take the place of a newspaper. You can't hunt it up later to settle an argument.

Rights Have Been Maintained

Basques Have Been Described As Race Within A Race

The world is hearing much to-day of Spain's Basques. Who are they? Living in three northern provinces of Spain, they are a race within a race. Mr. Lloyd George said the other day that the Basques were blood-brothers of the Welsh, but Mr. Lloyd George's facts left history and the matter is by no means clear.

Up to the fifteenth century the Basques were for all practical purposes an independent people within Spain; speaking their own language, maintaining their own customs and traditions. When they did come under Spanish kings they maintained certain rights and privileges, and these, through all political upheavals since, have been more or less maintained.

A picturesque, lovable and brave people, the Basques are famous for the apples they grow, for the cider they also make for their own use. Many of them engage in fishing, and some in mining, and the country is fairly rich in iron ore.

The Basques, contrary to a general impression, are not Communists. Almost overwhelmingly they are Catholics, and many of them are Catholic priests in Spain. But the Basques are Nationalists, are closely identified with the legends of Columbus and the Moors of France in the guise of "Christian Crusaders."—Ottawa Journal.

The Significance Of History

Archbishop Of Canterbury Defends Use Of Coronation Rites

In an introduction to the order of service in the official Coronation program, the Archbishop of Canterbury takes to task persons who may say, "and are not all these ancient rites and ceremonies quite out of place in this modern world?"

The question, says the Archbishop, "surely argues a singular lack of imagination and a singular lack of vision. It does get into one's head. Not because he is unwilling or habitually reckless. He is involved in slaughter because 'he has certain minor failings which assume major importance when he is in a hurry.' It is the duty of the average driver, therefore, to face his minor failings squarely and see to it that they do not become dominant in emergencies and make him responsible for manslaughter and serious property damage."—Galt Reporter.

Britain Means Business

People Willing To Carry Heavy Tax Load For Rearmament

Anyone who doubts that Britain is in a dead earnest about rearmament has only to look at the tax load the British are willing to carry these days. Before Neville Chamberlain, chancellor of the exchequer, brought in his new budget with its higher rates, the British taxpayer paid only 22½ per cent. of his income to the government in a direct tax. Beyond that he was to be covered with "indirect" taxes whose weight can be appraised by the size of those affecting motorists.

British motorists have been paying taxes of 18 cents on each gallon of gasoline. They also pay a horsepower tax on their cars, so set up that a man who owns a 25-horsepower car must pay \$150 a year for his license.

When a nation that is paying taxes at such rates submits to still heavier taxes for the sake of rearmament, it must be admitted that such a nation is decidedly in earnest about its preparedness program.—Kitchen Record.

A Healthy Pastime

Talking Builds Up The Lung's Tissue, Leading Specialist

Talking is one of the most healthful pastimes. A leading French lung specialist points out that many human ills result from weakness or deterioration of the lungs. Intensive talking, he declares, strengthens these delicate organs. As women are supposed to love gossiping, he suggests that this may explain why there are many more widows in the world than widowers—talking makes the women live longer.

The University of Edinburgh was founded in 1562 through a charter granted by King James VI, of Scotland.

There are 1,024,000 persons in the name of Johnson in the United States. 2203

The World's Wheat Field

Occupies Only About One Per Cent. Of The World's Land Area

How large is the world's wheat field? The food research bureau of Stanford University gives some interesting statistics. The world has about 400,000,000 acres under wheat, which is about twice the acreage devoted to maize or to rice, the grains that come next in importance.

The world's wheat field occupies about one per cent. of the total land in the world, about six per cent. of the world's wheat acreage, about 11 per cent. of all land suitable for wheat cultivation and about 17 per cent. of the arable land now being utilized.

While wheat is grown both north and south of the equator, about 90 per cent. of the world's wheat acreage lies in the northern hemisphere. Asia alone contains more than a third of the world's wheat acreage. Europe a little less than a third. North America less than a quarter.

The countries with the largest wheat acreage is Russia, 78,400,000 acres. The British Empire has 72,000,000 acres, Canada's share being under 30,000,000 acres. The United States has 63,900,000 acres, China 49,100,000 acres, the French Empire 22,400,000 acres and the Italian Empire 12,000,000 acres.

The Average Driver

Displays Certain Minor Failings When In A Hurry

The average motorist, according to a spokesman for the Harvard University bureau for street traffic research, has good intentions, is fairly careful and is, on the whole, a safe driver. There are thousands on this continent driving in traffic conditions and hundreds of thousands of others being injured every year? The average driver who is, in the whole, a safe driver, can not be exempt from responsibility.

The Harvard bureau spokesman places responsibility squarely upon that driver. He does get into accidents. Why? Not because he is unwilling or habitually reckless. He is involved in slaughter because "he has certain minor failings which assume major importance when he is in a hurry." It is the duty of the average driver, therefore, to face his minor failings squarely and see to it that they do not become dominant in emergencies and make him responsible for manslaughter and serious property damage. Galt Reporter.

Evidently Not On Diet

Last Hawaiian King Was Served Heavy Coronation Dinner

The original menu for the coronation of Kamehameha, the last king of Hawaii, which has just been discovered, indicates he was not on a diet. The official dinner was in the hotel palace, now the territorial governor's office. The menu included three soups, six varieties of fish, in addition to crabs and lobsters, seven kinds of roasted meat, two curries, potatoes, peas, corn, apricots, seven wines, six desserts, fruit, liquor and beer.

Just A Circular Room

A planetarium is a circular room over which is suspended a stainless steel dome serving as a screen upon which, by means of an intricate projector, it is possible to show in a realistic manner every star or other object in the sky that is visible to the naked eye.

SOVE YOUR "NEW FROCK" PROBLEM MAKE A DASH-ING SHIRTWAISTER

By Anne Adams

Want to look cool and crisp when the sun is shining just a shade too brightly? The answer to that question is Pattern 4413—your favorite shirtwaist that takes you everywhere and keeps you looking your best at all times.

The "tailor-made" dress is a classic part of this popular style at all times. For this smart pattern is one of the simplest to cut and stitch!

Helium was first discovered in 1868 when scientists noted it as a pale yellow band in the spectrum of the sun after a 27-year search. Helium was isolated from Texas gases, and today the Amarillo plant has a capacity of 30,000,000 cubic feet a year.

In 1915 the gas cost \$2.50 per cubic foot. Now it is being made for two-fifths cent a cubic foot. Other deposits of helium are found in Canada, which produces about 1,000,000 cubic feet annually, and in Kansas.

An Unusual Record

Italian Town Has No Births Or Deaths For Three Years

For three years there have been no deaths among the 400 people in San Gottardo, Italy, and several of the men and women are over 100 years old. I have almost forgotten how to recite the funeral service," said the deceased village priest to the visiting bishop. There also have been no births in San Gottardo in the three years.

If it were not for the sun's attractions, Jupiter would, because of its size, kidnap the other planets and send them to the dock of Neptune, which already circles it.

There are 7,407 miles of railways within the boundaries of Rumania.

RURAL QUEBEC

The above sketch is from the pen of Dr. Vernier Rondeau, dental surgeon of Rouleau, Sagap. It depicts a rural scene common in the province of Quebec where the doctor spent his childhood.

Heredity and Intelligence

Investigation Finds That There Is Very Little Connection

Dr. Donald Blythe, of the University of Toronto, said that there is apparently little relation between heredity and intelligence.

Reported on a study of 312 children placed in foster homes by the Toronto infants' home and their parents, he told the Mid-Western Psychological Association: "Results of the study offer little comfort to those who believe that intelligence of a child is unalterably fixed by its heredity. There is every indication that the effect of heredity upon the intelligence quotient is much less than many have supposed."

His survey covered the infants' home records over a period of about eight years. Only those children whose mothers' intelligence rating had been established were considered.

Dr. Blythe said the best showing was by children whose mothers were in the average intelligence group with mental ratings of 10 to 13 years of age.

The 77 mothers in that category produced 77 children whose "I.Q." was in the superior class, a number equalling that of both the other groups.

"While definitely abnormal mothers had a slightly higher percentage of abnormal children," Dr. Blythe said, "the majority of their children had normal intelligence and the percentage of superior children compared with that of other mothers."

"There appears to be some correlation between the intelligence quotient of mothers and of their children who have been reared in foster homes, but the relationship is so slight that knowledge of a mother's intelligence quotient is of very little value in predicting the intelligence quotient of her child."

Helium Gas

Most Of The World's Supply Is Refined in Texas

Most of the world's helium supply is refined from natural gases at a United States government plant seven and one-half miles west of Amarillo, Texas.

Only slightly heavier than hydrogen, lightest of chemical elements, helium penetrates gas bags far less readily than hydrogen. This and the fact that it is non-explosive, makes it a prize sought after by many foreign governments, especially Germany, whose hydrogen-filled Zeppelin Hindenburg crashed in flames.

Helium was first discovered in 1868 when scientists noted it as a pale yellow band in the spectrum of the sun after a 27-year search. Helium was isolated from Texas gases, and today the Amarillo plant has a capacity of 30,000,000 cubic feet a year.

In 1915 the gas cost \$2.50 per cubic foot. Now it is being made for two-fifths cent a cubic foot. Other deposits of helium are found in Canada, which produces about 1,000,000 cubic feet annually, and in Kansas.

Gardening

Several sowings of each vegetable at the same time, and then there will be a feast of a famine. After all, with much change in weather, prices, and so on, it is not surprising that the gardener's worth eating is when they are fresh; that is, just as they come.

Those who know all about the art of good gardening, advocate as a good rule covering the entire season a depth equal to about three times the depth of the soil. This is not advised to procure a pair of callipers and measure the soil, but the diameter of the great variety of seeds or the size of the plants is a rough rule. With tiny seeds like those of the poppy or the onion, seed about the size of a pea, and so on, the soil will be sufficient. With large things like gladioli and dahlias bulbs or potatoes, this rule will call for depth of several inches. With peas, beans and corn it will mean about an inch.

Too much stress can hardly be laid on the necessity of tilting. After the plants come in, it is urged to stop and consider just how big these plants become. It may be only six inches, in which case a space of a few inches apart will be ample. If it is the common or larger type of plant, the spacing should be fully considered. There will reach the top of the plant, and the plant will be fully grown. Such things require much space. The plants will be metrical and sturdy plants that will bear beautiful and storm resistant. Give the plants the space they need, and they will be healthy and strong, and allowing about half as much space as the plant will need, and whether it be vegetable, flower or shrub.

Mystery Of Stonehenge

Prevailing Theory Is Wrong According To A French Scientist

When Stone Age man and his wife Britain went to worship at the famous place called Stonehenge, they may have had comfortable seats in stone. In other words, the great stone circles of ruins, now one of England's prize mysteries, may once have been a covered temple.

Placed up at the sixteen-foot stones that outline a great circle. They point out the direction of the rising and setting of the sun, and the stars like arrangement of stones within. In their minds, they conjure up a picture of Stone Age Britons gathering in the open air by moonlight or at sunrise for strange, barbaric rites of worship.

But this picture is a picture in wrong, according to a theory advanced by Prof. A. Vayon de Pradelle, of the University of Paris, in the British archaeological journal Antiquity. The prehistoric builders constructed the Stonehenge with massive stones and earthen plaster over the stone-work skeleton, he believes.

To see what the building was like, we have only to look at the North American Indian earth lodge, in the Great Plains region.—Victoria Times.

Recalls Old Mystery

Where Of First Made On Phantom Ship Is Dead

Mrs. Frances N. Richardson, 91, widow of the first mate on the "phantom ship" the Marie Celeste, which crew vanished on the high seas in 1872, died recently in New York.—The mystery of her husband's fate still remains.

As a bride, Mrs. Richardson stood down on the deck and waved goodbye to her husband, Albert, and the crew as the Marie Celeste sailed for Genoa from New York harbor with a cargo of oil in casks.

She never saw her husband again. The British bark, Del Gratia, found the Marie Celeste floating on the ocean off the Azores Dec. 4, 1873, nearly a month after she sailed—no man aboard.

The cargo was undisturbed, and there were no signs of disorder, and food had been prepared for the next meal. On one of the ship's crew, Capt. R. S. Briggs, hung on his chain beside his empty berth.

Sound Travels Far

Dynamite Blast In Arctic Was Heard 2,000 Miles Away

City dwellers may think the world's biggest noise is the daily arrival of the milkman around sunrise, but it is record that the volcanic eruption of the island of Kilauea in 1883 was heard 1,400 miles away. The Helix-Bell-Bell dynamite blast set off in the Arctic in 1933 was heard 2,000 miles distant, in Berlin.

A peculiarly loud sound was heard in the sound waves which carry such detonations is that closer to the explosions there are zones of silence in which the noise is heard.—Christian Science Monitor.

Tuberculosis of the spine has been noted in human skeletons more than 10,000 years old.

Some parrots have been known to live for 80 years.
